

StoragePartners

Business Backup, Recovery & Storage Consultants

Storage Partners is an I.T. consultancy specialising in electronic data storage solutions. Partnering with some of the best companies in this field we can provide an enterprise class solution for your business that is unique to you and your business needs; today and for the future.

Storage Partners are not interested in selling you just a piece of expensive hardware. Our goal is to create a storage solution that is right for your business. We have carefully chosen a range of products that allow us to offer the best features and functionality available.

Product Range

Since our business is based on solving problems and adding business value, we have grouped our products into the business issues that our customers typically face.

➤ **Backup, Archiving & Compliance**

Backups taking too long? Important, but old data cluttering up your systems? Facing regulatory, auditing or other compliance issues? We can solve your backup problems.

➤ **Disaster Recovery**

You may not be able to prevent a disaster, but you can put measures in place to cope with the consequences. Good planning and a fast recovery can make the difference between your business failing or succeeding in a time of crisis.

➤ **Virtualisation & Consolidation**

See how you can revive legacy applications, increase productivity and resource utilisation, reduce your overheads (both CapEx and OpEx budgets) and help the environment by reducing your power and heating requirements.

➤ **Storage Solutions**

Are your servers tied up sharing files? Lots of disk space, but in the wrong place? Always running out of space for business critical servers? Why not try a handy NAS or SAN solution, available in bespoke and simple quick start packages.

➤ **Business Intelligence**

Lots of data but no information? Separate I.T. systems but no single view of the business? Combine all this into one seamless resource to help you understand, plan and grow your business.

➤ **Encryption & Security**

Use offsite or remote backups for peace of mind? Have remote offices, data centres or home workers? Your business should be as secure outside the entrance door as within the building. We can help, and we won't tell anyone we did!
